

TESTING & CONSUMING HRS APIS IN BP LOGIX

OVERVIEW

This document covers the process of requesting access to the existing HRS APIs, testing the HRS APIs in BP Logix and enabling them in production. This document is intended to provide an overview of the process and details for the BP Logix administrators will be supplied outside of this document.

REQUESTING ACCESS TO THE HRS APIS

Currently there are 8 APIs provided by the HRS API team. For information about the HRS APIs and to [request](mailto:serviceoperations@uwss.wisconsin.edu) access please contact serviceoperations@uwss.wisconsin.edu.

As part of the request, the HRS support team will do the appropriate setup for your institution and validate that the test security credentials work appropriately. Once validated, the URLs and login credentials will be forwarded to the requestor.

You will receive production credentials. Credentials for an HRS test system can be supplied if requested.

SET UP AND VALIDATION IN BP LOGIX

If you have not used HRS APIs within BP Logix, please contact helpdesk@uwss.wisconsin.edu. Note in your email that you need assistance setting up HRS APIs in BP Logix so that the request can be routed appropriately.

HRS API SUPPORT

For support with the APIs, contact serviceoperations@uwss.wisconsin.edu

REQUESTING CHANGES TO THE HRS APIS

To request changes to the existing HRS APIs, contact serviceoperations@uwss.wisconsin.edu

REQUESTING A NEW HRS API

To request a new HRS API, contact serviceoperations@uwss.wisconsin.edu
